

QC30 – Multidisciplinary Team Review Note (Peter)

-For training purposes only-

 <p>Queensland Government Mental Health Alcohol and Other Drugs Service Progress Note Facility: Inpatient</p>	<p>URN:</p> <p>Family name: Care scenario Given names: Peter Date of birth: 5/3/1980 Sex: M</p>		
<p>Multidisciplinary team review:</p> <p>Peter has been an inpatient since 19/4/20. Currently taking oral meds; ?med compliance long term.</p> <p>Peter keeps to himself on the ward. Does not say much, sometimes asks to call police to report 'Steve' who is his sister's boyfriend. 'Steve's a bad guy, you don't even know how bad'. Seen responding to non-apparent stimuli. Some talk of 'the Illuminati' to the nursing staff. Food intake reasonable, good fluid intake. Needs to be reminded to shower, change clothes. UDS negative.</p> <p>Sister (Rebecca) and parents have called ward to speak with Peter. Peter provided written consent for us to communicate with Rebecca. Sister wants to visit ward with Steve tomorrow.</p> <p>Team discussion:</p> <p>Active symptoms of psychosis. Depot written up for today for med compliance – Risperdal Consta 25mg fortnightly due to good tolerance of risperidone previously. Increase dose in future if tolerates and symptoms persist. Peter has been told that he is having depot. He said he does not need it but he won't fight staff if they really want him to have it.</p> <p>Risk Screen elevated for violence. History of violence, recent attack on uncle and hiding weapons. Nil other risks identified.</p> <p>Plan:</p> <p>Consider depot. Refer for a V-RAM due to heightened risk screen.</p>
